International Lean Farming Discussion Group - Benchmarking Information

During our visit to the UK we will be using benchmark data to look productivity and labour costs and how Lean management can help reduce these areas of cost within the farming business.

To enable us to do this we would like each farmer attending to provide us with the following information so that we can compile the data prior to the meeting and present it in a format that allows us to compare businesses. This will be done on a confidential basis so that individuals' data is not shared. The information we require is as follows:

Information Required	Figure (per Year)
*Total Hours worked by employed staff. (include employed and self-employed staff)	
*Total Hours worked by business owners	
Cost of Labour, both employed and self-employed	
Litres of Milk Produced per Annum (sold to dairy)	
Average Butterfat %	
Average Protein %	
Machinery costs (separate): Machinery Repairs Fuel Contractors	

*If possible, please only include hours spent working with stock and exclude hours on field work.

Please could you return this information to Phil Cooper by the 12th October, so we have time to put together the comparative figures. If you have any queries, please also contact Phil Cooper on the following details:
